

Sciences

Science includes experiences and outcomes in biological, chemical, physical and environmental contexts.

The most important goal for science education is to stimulate, nurture and sustain the curiosity, wonder and questioning of children and young people. Young children have a natural sense of wonder and curiosity and are active and eager learners endeavouring to make sense of the world.

They develop ideas through play, investigation, first-hand experience and discussion.

A Science programme is in place to ensure a progressive development of skills and knowledge throughout the school.

The key concepts have been clearly identified using five organisers:

- Planet Earth
- Forces, electricity and waves
- Biological systems
- Materials
- Topical Science
