

Mathematics

Mathematics is important in our everyday life, allowing us to make sense of the world around us and to manage our lives. Using mathematics enables us to model real-life situations and make connections and informed predictions. It equips us with the skills we need to interpret and analyse information, simplify and solve problems, assess risk and make informed decisions

Mathematics equips us with many of the skills required for life, learning and work. Understanding the part that mathematics plays in almost all aspects of life is crucial. This reinforces the need for mathematics to play an integral part in lifelong learning and be appreciated for the richness it brings.

Our programmes of work for maths and numeracy are planned to ensure that children have opportunities to develop the core skills, as well as problem solving skills, progressively in a variety of contexts. We use core resources at each stage for all levels of ability. As with all curricular areas, children work on the level that suits their ability and, at all stages of the Maths course, the following key skills are taught:

- Number, Money and Measure
- Shape, Position and Movement
- Information Handling
